Context & Aim

The directive for promoting clinical effectiveness stems from the need to achieve;

Improved patient experience

Improved health of populations

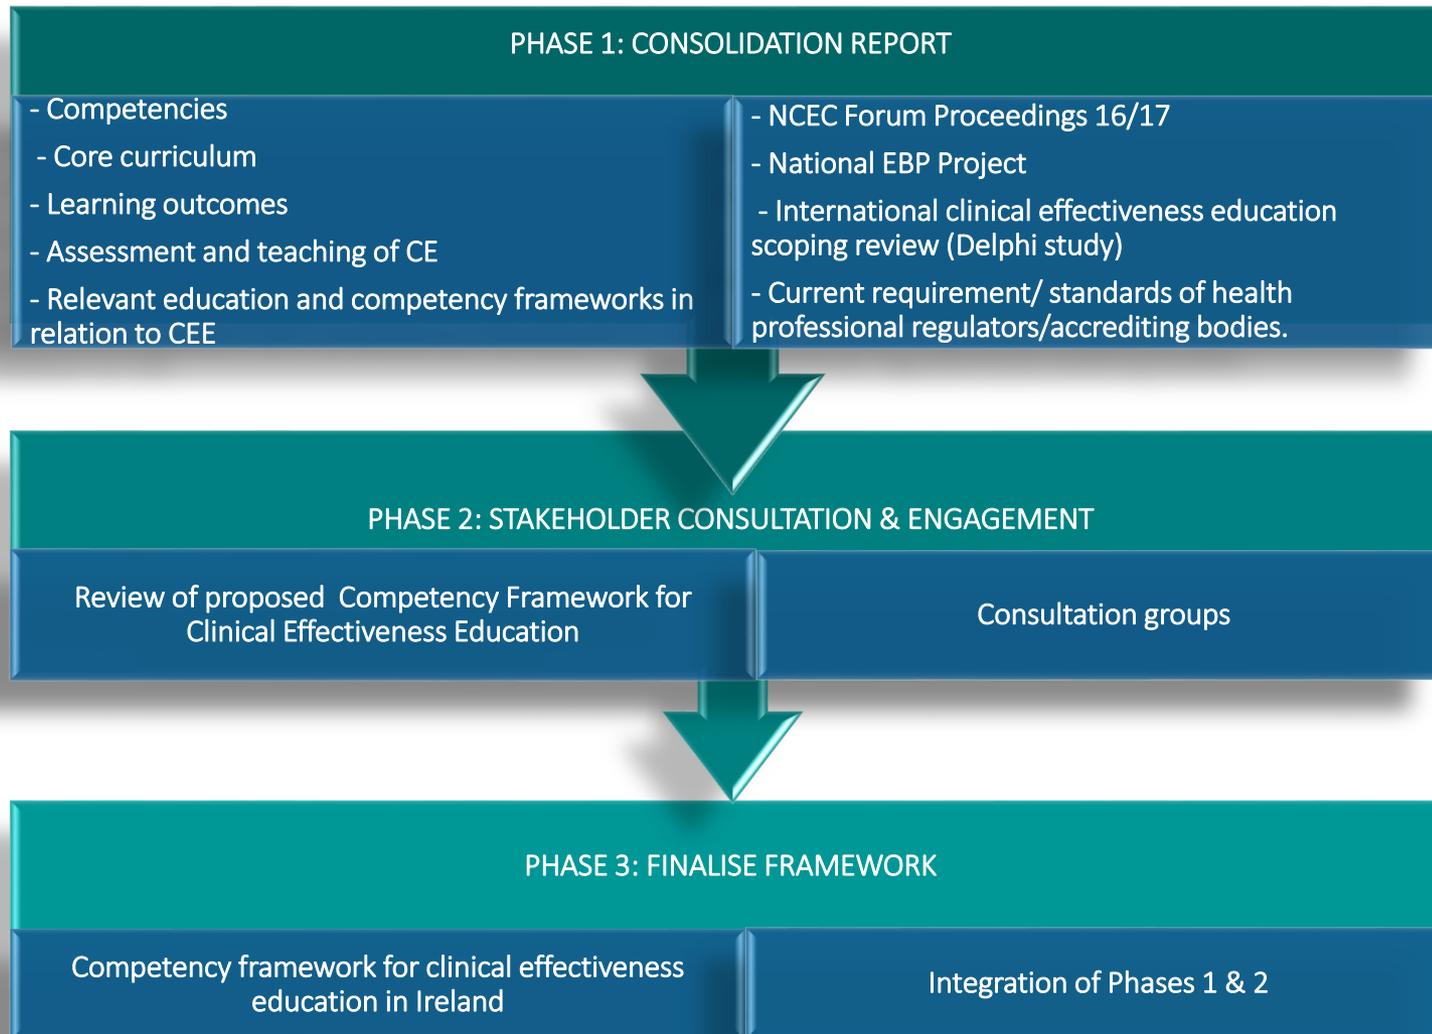

Reduced per capita cost of healthcare

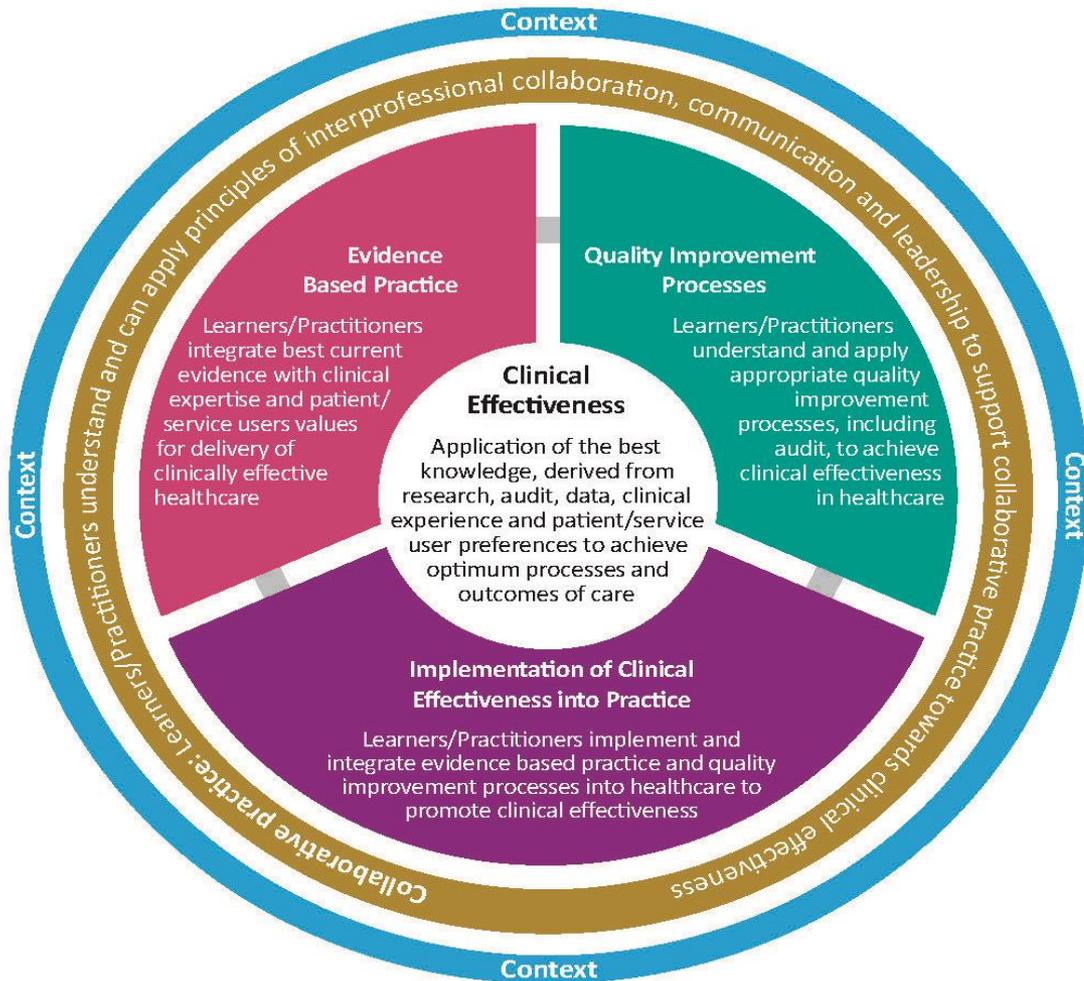

(Gilliam & Siriwardena 2014)

Develop a competency framework for clinical effectiveness education across health & social care professions in Ireland

Methods

Competency Framework

Competency Framework for clinical effectiveness education Summary

2019

Domain 1: Evidence-based practice

Domain 2: Quality improvement processes

Domain 3: Implementation strategies

Domain 4: Collaborative practice

Domain 1. Evidence-based Practice

Acknowledgement: Albarqouni L, Glasziou P, Hoffmann T, Rydland Olsen N, Young T, Ilic D, et al.

Core competencies in evidence-based practice for health professionals: consensus statement based on a systematic review and Delphi survey. JAMA Netw Open. 2018;1(2):e180281.

Competency Statement:

Learners/practitioners integrate best current evidence with clinical expertise and patient/service-user preferences and values, for delivery of clinically effective healthcare.

Indicators:

- To understand fundamental or core concepts associated with EBP.
- To structure clinical questions, learners/practitioners demonstrate “ask” competencies.
- To ‘identify’ and recognise relevant sources of research information and evidence.
- To critically evaluate the integrity, reliability and applicability of health research.
- To engage with evidence in daily practice.
- To reflect upon knowledge translation processes.

Rationale:

To improve clinical effectiveness it is essential for learners/practitioners to adopt an evidence-based approach to their practice.

Domain 2. Quality Improvement Processes

Competency statement:

Learners/practitioners understand and apply quality improvement processes to achieve clinical effectiveness in the context of healthcare.

Indicators:

- To understand fundamental or core concepts associated with quality improvement processes.
- To identify areas for quality improvement, by analysing the care setting for gaps between local and best practice standards.
- To apply quality improvement processes into practice.
- In considering continuous quality improvement processes, demonstrate “reflect” competencies.

Rationale:

Quality improvement processes should be part of the efforts of learners/practitioners to make changes that lead to clinically effective practice, through better patient outcomes, better experience of care and continued development of staff.

Domain 4: Collaborative practice

Domain 3: Implementation strategies

Domain 2: Quality improvement processes

Domain 1: Evidence-based practice

Domain 3. Implementation Strategies

Competency Statement:

Learners/practitioners implement and integrate evidence-based practice and quality improvement processes into healthcare to promote clinical effectiveness.

Indicators:

- To understand fundamental and core concepts associated with implementation science.
- To identify challenges and enablers for operationalising implementation of best evidence and quality improvement processes into clinical practice.
- In considering implementation processes, learners/practitioners demonstrate "apply and reflect" competencies.

Rationale:

Dedicating time and resources to implementation plans and actions is crucial to integrating evidence-based guidelines and quality standard interventions into practice.

Domain 4. Collaborative Practice

Competency Statement:

Learners/practitioners understand and can apply principles of inter-professional collaboration, communication and leadership to support collaborative practice towards clinical effectiveness processes, which promote healthcare that is evidence-based, effective and consistent.

Indicators:

- To support inter-professional “collaboration”.
- To “communicate” appropriately in professional practice.
- To determine best “leadership” approaches to achieve clinically effective processes.

Rationale:

Effective professional relationships and patient/service-user involvement are key characteristics of collaborative practice towards clinical effectiveness.

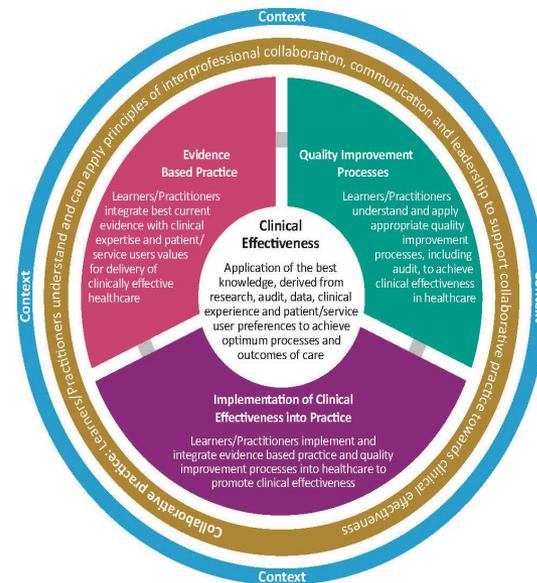

Principles & Application

Principles underpinning framework:

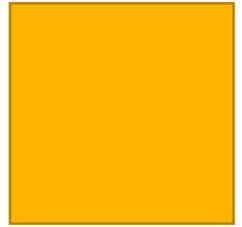

- Designed for all health and social care professionals, with competency domains generic and universal in nature.
- Assumes evidence-based practice is an inter-professional collaborative effort.
- Places the service user/patient at the center of professional learning.

Framework application:

- Curriculum considerations.
- Teaching and learning strategies.
- Assessment methods.

Strengths & Limitations

Strengths

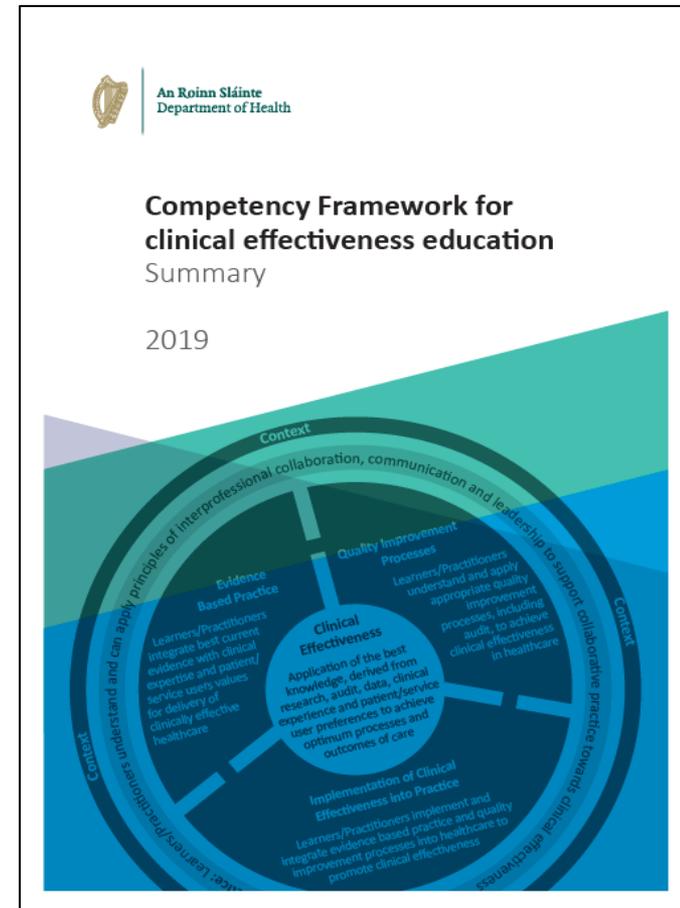

- A multi-stage approach that combined various research methods and data sources.
- The framework was informed by a rigorous scoping review that complied with standards for conducting and reporting of scoping reviews.
- All competencies were reviewed and refined by experts from different health care professions and settings.

Limitations

- Empirical and grey literature Search limited from 2008 onwards.
- Patient/service user representation was absent despite invitations issued.
- Validation of the framework from the patient/service user perspective

End Outputs....

- The competency framework for clinical effectiveness education for health and social care professionals was published by the Department of Health in Ireland in 2018.
- A dissemination strategy to raise awareness is underway
- Curriculum mapping project(s)

Project Team & Acknowledgments

Project Team:

Dr Elaine Lehane (PI)₁, Dr Heloise Agreli₁, Ms Simone O'Connor₁, Professor Josephine Hegarty₁, Dr Patricia Leahy Warren₁, Dr Deirdre Bennett₂, Professor Catherine Blake₃, Dr Francis Burke₄, Professor Mark Corrigan₅, Professor Jonathan Drennan₁, Dr Martina Hayes₄, Dr Elizabeth Heffernan₆, Professor Frances Horgan₇, Dr Helen Lynch₈, Dr Joseph McVeigh₈, Professor Nicole Muller₈, Ms. Elizabeth O'Keefe₉, Dr Colm O'Tuathaigh₂, Dr Laura Sahn₁₀, Professor Eileen Savage₁

Acknowledgments:

- The Clinical Effectiveness Unit of the National Patient Safety Office for commissioning this research.
- The valuable input from all stakeholders who participated in the consultation forums.
- Special thanks to the NCEC Education and Training sub-group, especially Dr Niamh O'Rourke and Professor Dermot Malone for their governance, support and direction.
- Dr Albarqouni and his international project team for permission to adopt their EBP core competencies
